ABSTRACT:

PROBLEM TO BE SOLVED: To provide a circulation system giving the flexible notice of information such as to execute circulation while the opinions of respective objective persons are reflected.

SOLUTION: A hyper text mark up language (HTML) document generated in an HTML generation part 12 is opened to the public on a Web server 13 as a circulation content. A control part 11 transmits the notice for making the objective person of the circulation of a record in a circulation list 17, which a list counter 16 shows, to refer to the generated HTML document from a transmission part 15. The objective person of circulation, who receives

the notice, makes a response in accordance with the content of the HTML document to be referred to.

When the response from the objective person is inputted to a CGI execution part

14, the content of the HTML document is updated in accordance with the inputted response content and the HTML document after update is opened on the Web server

13. The list counter 16 is counted up by one and the notice is given to the next objective person of circulation. Thus, the next objective person of circulation refers to the HTML document after update as a circulation document.
